

PRELIMINARY INVESTMENT MEMORANDUM · SCENARIO A

ARZ

Luxury eco-resort and branded residences

The first luxury eco-resort of the Middle Atlas, in the heart of the cedar forest
7-hectare land plot — Ifrane, Morocco

Confidential document — working draft

01 Executive summary

ARZ ('cedar' in Arabic) proposes to turn the 7 hectares into a 40-key luxury eco-resort — suites, treehouse cabins and pool villas — organised around a forest spa, two restaurants and an events pavilion. To reduce the equity requirement, 14 'branded residence' villas are sold off-plan and integrated into the hotel's rental programme. The project targets high-end Moroccan and international guests, in particular Gulf families seeking summer coolness and privacy.

TOTAL INVESTMENT	HOTEL KEYS	STABILISED EBITDA
MAD 242m	**40 + 14**	**MAD 18.5m**
€22.4m	hotel keys + residences sold	2033

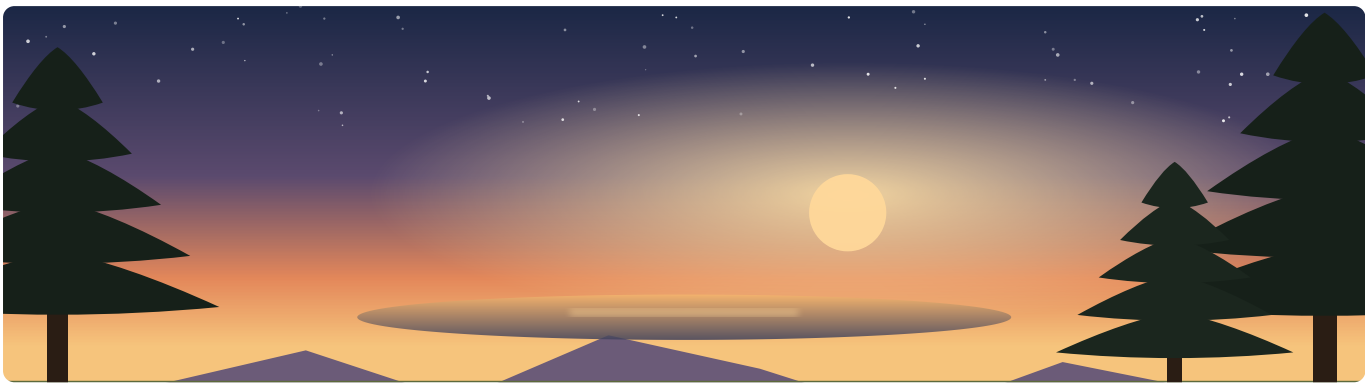

PROJECT IRR (BASE)	ESTIMATED EXIT VALUE	PAYBACK PERIOD
9.1%	**MAD 278m**	**≈ 13.8 years**
10.9% with a 15% grant	2039	from 2027 · 10.8 years after opening

- Estimated total investment: MAD 241.5m (≈ €22.4m), land included.
- Sale of 14 branded residences: MAD 86.8m in sales, net margin of MAD 44.4m reinvested in the project.
- EBITDA in the stabilised year (2033): MAD 18.5m, i.e. 25% of revenue.
- Base-case project IRR: 9.1%; 10.9% with a 15% investment grant; indicative equity IRR 10.4% with 45% debt.
- Indicative payback: ≈ 10.8 years after opening; estimated exit value in 2039: MAD 277.6m.

How to read the data. Every figure or fact carries a status: **Verified** (public source listed in the appendix), **Estimate** (explicit working assumption, to be refined by studies) or **To verify** (information provided or inferred, not confirmed to date).

Indicative conversion: EUR 1 = MAD 10.8 [Estimate].

02 The concept

Vision

To make ARZ the reference address for luxury nature tourism in Morocco: a place where architecture steps back behind the forest, where every unit opens onto the cedars, and where the experience — hiking, horse riding, local gastronomy, forest bathing, starry skies — justifies an average rate above the local market.

Objectives

- Create a four-season destination (snow, spring blossom, cool summer, autumn) to smooth Ifrane's seasonality.
- Reach 60% stabilised occupancy and an average rate of about MAD 4,300 per night in 2033 [Estimate].
- Obtain a recognised environmental certification (LEED, EarthCheck or Green Key type) from opening.
- Create value from the land through the sale of 14 branded residences benefiting from hotel services.
- Recruit and train at least 70% of staff within Ifrane province [Estimate].

Positioning

Discreet, responsible 'quiet luxury', halfway between a nature lodge and a major-brand resort. ARZ differs from existing supply through its low density (about 13% site coverage), units set apart in the forest and a programme of experiences rather than hotel comfort alone. It can be operated under an international responsible-luxury brand or as an independent brand with a specialist operator.

What sets it apart

Treehouse cabins

12 cabins on stilts at canopy height: a product unprecedented in Morocco, highly photogenic and strongly differentiating.

Forest spa

Hammam in local stone, heated outdoor pools facing the snow, cedar-wood sauna, rituals using Atlas plants.

Starry skies

Low light pollution: observatory and astronomy evenings, limited downward-facing outdoor lighting.

Local produce

Organic kitchen garden, orchard, local producers (apples, cheese, Middle Atlas honey) at the heart of the cuisine.

03 Site analysis

Ifrane, known as the 'Switzerland of Morocco', is a Middle Atlas mountain town famous for its Alpine-style architecture, cedar forests, winter snow and cool summers. It is home to Al Akhawayn University and to the five-star Michlifen resort. The 7-hectare plot under study lies south of the town, along provincial road RP7229, south of the N8 national road, in a clearing bordered by forest.

Feature	Information	Status
Area	7 ha (70,000 m²)	To verify
Location	South of Ifrane, along RP7229, south of the N8 (screenshots provided)	To verify
Distance to Ifrane centre	About 6–7 km (inferred from the 1 h 24 walking route)	Estimate
Altitude of Ifrane	About 1,650 m	Verified
Air access	Fès-Saïss airport: ≈ 1.9 million passengers in 2025	Verified
Road distances	Fès ≈ 60–65 km, Meknes ≈ 60–65 km, Rabat ≈ 200 km	Estimate
Ifrane National Park	Created by Decree No. 2-04-783 of 8 October 2004; ≈ 51,800 ha	Verified
Plot inside the park	The map marker reads 'Parc National d'Ifrane': inclusion to be confirmed	To verify
Prestige neighbourhood	Palace attributed to Sheikha Moza on a wooded hill at the edge of Ifrane (press, 2016); exact distance to the plot	To verify
Land title	Title deed, nature (private, state, forest, collective) and easements	To verify
Zoning	Tourism zoning as stated; local development plan and regulations to be obtained	To verify
Utilities	Water, electricity (ONEE), sewerage, fibre: capacities and connection distances	To verify
Topography and soil	Clearing with an apparently gentle slope; topographic and geotechnical surveys required	To verify

Critical point before any commitment

Law No. 22-07 on protected areas regulates property rights inside a national park: according to the Court of Auditors, land located there must not see its condition and appearance changed from the date the park was created. If the plot lies within the boundary of Ifrane National Park, any construction project would be heavily restricted or even impossible. **The first step is therefore to overlay the plot's cadastral plan on the park boundary map and to obtain an official zoning information note.** The three scenarios in this memorandum assume this point is resolved favourably.

Route from Ifrane town centre to the site (screenshot provided). The time shown is a walking time, which places the plot about 6–7 km from the centre [Estimate].

Satellite view of the area: the N8 national road to the north, provincial road RP7229 and the clearing where the plot marker sits, surrounded by cedar and oak forest (screenshot provided).

Natural and tourism environment

- **Nature:** Atlas cedar and holm oak forest, high-altitude meadows, iconic wildlife (Barbary macaque) — a landscape asset rare in Morocco [Verified for the region; to be confirmed for the plot].
- **Climate:** snowy winters and cool summers. Ifrane holds Africa's lowest recorded temperature (−23.9 °C in 1935). For Gulf clients the key argument is summer: mild temperatures while the Gulf exceeds 45 °C [Estimate].
- **Tourism:** weekend destination for families from Fès, Meknes, Rabat and Casablanca; very limited high-end supply (a single benchmark five-star resort); nature, snow and events tourism [Estimate].
- **Neighbourhood:** nearby prestige residences enhance the area's image, but call for discretion, security and probable constraints (heights, activities, drone flights). We recommend not using the name of any public figure in marketing.

Reading the site for this project

For ARZ, the forest-ringed clearing is a major asset: units can be placed along the forest edge, under tree cover, keeping the centre of the clearing as meadow. Direct access from RP7229 makes it possible to separate service logistics from guest circulation.

04 Development programme

The programme is deliberately low-density: about 9,000 m² built for the hotel and 3,640 m² for the branded residences, i.e. an estimated site coverage of 13%. Buildings do not exceed one storey plus attic, in timber, stone and green or tiled roofs.

Component	Number	Area	Description
Cedar suites	20	55 m²	Suites at the forest edge, private terrace, fireplace.
Treehouse cabins	12	70 m²	Cabins on stilts, hot tub on the terrace.
Pool villas	6	150 m²	2 bedrooms, heated pool, private garden.
Grand villas	2	300 m²	4 bedrooms, majlis, private kitchen — Gulf families.
Forest spa and hammam	1	1,500 m²	Indoor and outdoor pools, 8 treatment rooms, sauna, fitness.
Restaurants and bar	2 + 1	900 m²	Signature local-produce restaurant, all-day dining, library bar.
Events pavilion	1	450 m²	Weddings, executive retreats, 150 guests.
Reception, lounges, kids' club	—	700 m²	Reception, library, kids' and teens' club.
Equestrian club and activities	—	200 m²	Stables, trail rides, mountain biking, observatory.
Back-of-house and staff housing	—	1,800 m²	Kitchens, laundry, technical rooms, staff housing.
Branded residences (for sale)	14	260 m²	3–4 bedroom villas managed by the hotel.

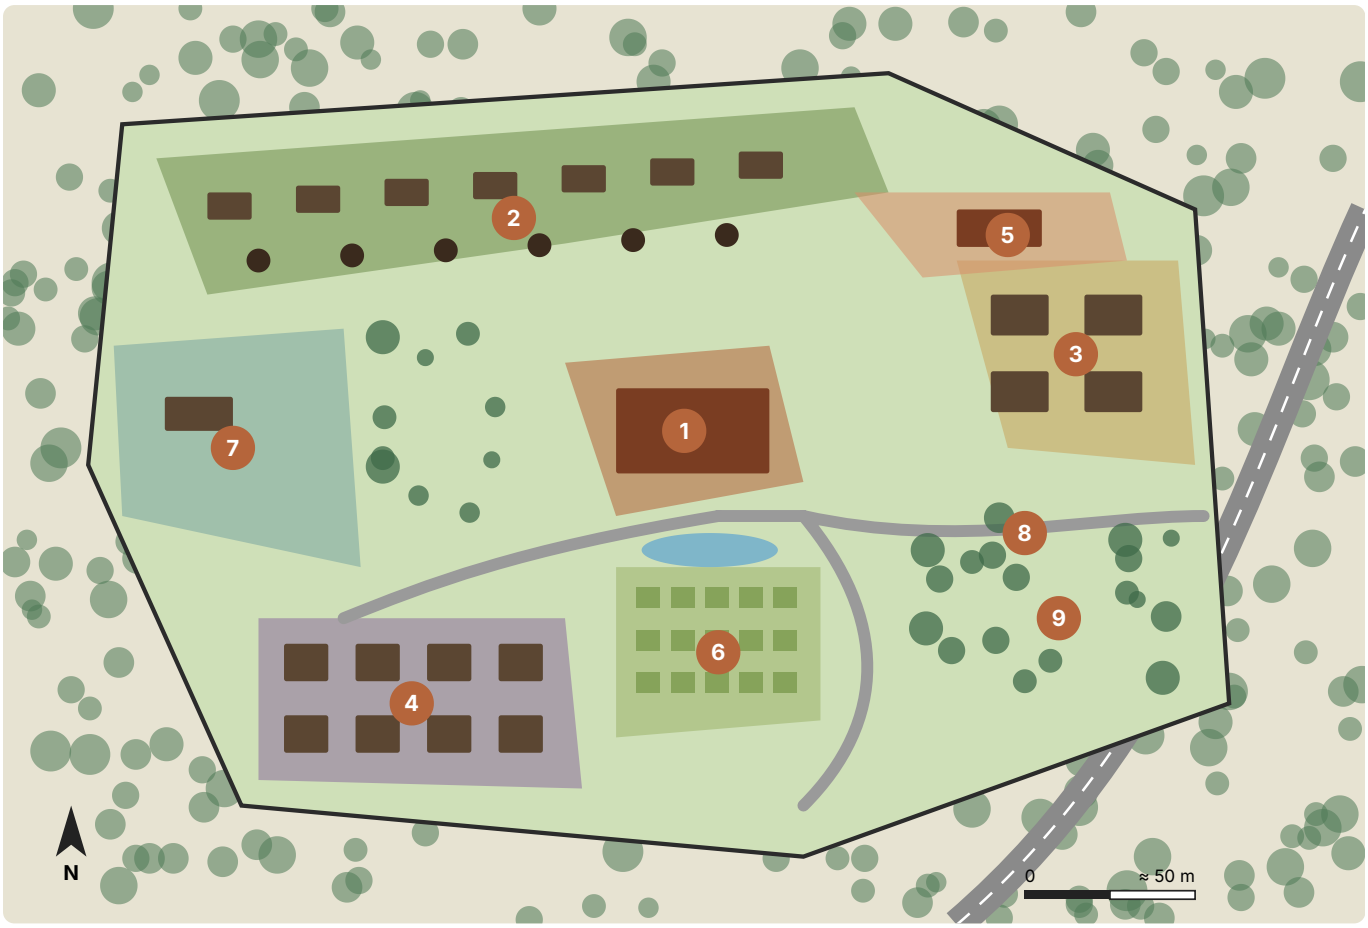

Infrastructure and utilities

- Drinking water: network connection or licensed borehole (Sebou River Basin Agency), storage tanks and fire reserve.
- Wastewater: compact on-site treatment plant, treated water reused for irrigation.
- Energy: ONEE grid connection + solar PV plant (≈ 0.8–1 MWp) and heat pumps; biomass heating possible.
- Roads: main access from RP7229, permeable internal lanes, landscaped parking, electric vehicles on site.
- Digital and security: fibre optics, perimeter CCTV, access control, 24/7 security post.
- Winter: snow-clearing plan, frost-resistant materials, roofs designed for snow loads.
- Raised timber boardwalks, low-intensity lighting to protect the night sky.

Leisure and services

- Guided hikes and forest bathing
- Horse riding and trail rides
- Mountain biking and cross-country skiing (snow permitting)
- Astronomy observatory
- Local cooking workshops
- Nature kids' club
- Corporate retreats and weddings

Concept masterplan (not contractual)

Indicative diagram: layout, boundaries and access to be adjusted to the topographic survey and cadastral plan.

Zone	Area (m²)	% of site
1. Resort core (reception, restaurants, spa)	9,000	13%
2. Suites and treehouse cabins	14,000	20%
3. Hotel villas	6,000	9%
4. Branded residences	14,000	20%
5. Events pavilion and gardens	4,000	6%
6. Kitchen garden and orchard	5,000	7%
7. Equestrian club and outdoor activities	6,000	9%
8. Roads and parking	5,000	7%
9. Preserved meadow and forest	7,000	10%
Total	**70,000**	**100%**

05 Market study

Market data

Information	Value	Status
Tourist arrivals in Morocco, 2025	19.8 million (+14%), an all-time record	Verified
Tourists (narrower definition)	18.2 million according to the official results quoted in the press	Verified
National hotel occupancy, 2025	68% (single source, to be cross-checked)	To verify
Fès-Saïss airport, 2025	≈ 1.92 million passengers (−1.3%): regional air access remains a weak point	Verified
FIFA World Cup 2030	Programme of about USD 4 billion to expand national hotel capacity	Verified
Five-star supply in Ifrane	Michlifen Resort & Golf, ≈ 70 rooms; average five-star rate in Ifrane ≈ €290/night	Verified
Urban land prices in Ifrane	≈ MAD 2,500–3,700/m² (listings, small plots); very large plots much cheaper per m²	Verified

Target clientele

Segment	Description	Indicative weight
Gulf families	Summer stays of 1 to 3 weeks, large villas, privacy, halal services and majlis.	25%
Affluent Moroccan guests	Weekends and holidays from Casablanca, Rabat, Fès and Meknes; snow in winter.	35%
International luxury travellers	'Imperial cities + Atlas' itineraries, nature and wellness tourism.	20%
Corporate and events	Executive retreats, incentives, high-end weddings.	20%

ARZ answers a demand that Ifrane's current supply serves poorly: luxury accommodation immersed in nature, with large family formats and a programme of experiences. The local price benchmark (≈ €290 per night on average for a five-star) and the luxury lodges of the High Atlas suggest that an average rate of about MAD 3,900 (≈ €360) at opening in 2030 is achievable for a clearly differentiated product [Estimate].

Gulf investors and families look in Morocco for assets combining **summer coolness, privacy, large family formats, hotel services and cultural affinity**. Ifrane ticks these boxes, yet existing supply offers no branded residences, no international-standard wellness retreat and no villas with full hotel services [Estimate, to be confirmed by a targeted demand study].

Competing supply and benchmarks

Property / offer	Description	Relevance to the project
Michlifen Resort & Golf (5*)	Benchmark resort, ≈ 70 rooms, spa, golf, luxury positioning	Direct competitor and proof of high-end demand
Ifrane 3–4* hotels and guesthouses	Family weekend supply, mid-range prices	Little competition at the very top end
Private rental villas (Airbnb, seasonal lets)	Strong demand in summer and in snow season	Reveals demand for large family formats
Mountain and nature resorts (Atlas, Ourika)	Luxury lodges in the High Atlas around Marrakech	Price and concept benchmarks

Commercial opportunities

- The 2030 World Cup and growing domestic tourism create a favourable opening window.
- Nature and wellness tourism is growing faster than classic beach tourism [Estimate].
- No treehouse or certified luxury eco-resort offer in the Middle Atlas [To verify].
- Possible partnerships with Al Akhawayn University (seminars, conferences) and with Fès travel agencies' itineraries.

06 Business model

The model combines hotel operations (recurring income) with the sale of branded residences (immediate income that reduces the equity requirement). The hotel is entrusted to a specialist operator under a management contract; the owner keeps ownership of the real estate and its long-term value.

Revenue streams

Revenue stream	Description	Share
Rooms	Nights in the 40 hotel keys, dynamic seasonal pricing.	52%
Food and beverage	Two restaurants, bar, room service, forest picnics.	24%
Spa and wellness	Treatments, rituals, local memberships.	12%
Events and corporate	Weddings, retreats, buy-outs.	8%
Activities and retail	Horse riding, excursions, local products.	4%

Complementary services

- Rental management of the 14 branded residences (revenue share with owners)
- Annual 'ARZ Club' memberships for regional families
- Concierge, chauffeurs and transfers from Fès-Saïss
- Local products sold under the ARZ brand

Partnerships

- Responsible-luxury hotel operator (management contract or franchise)
- Moroccan banks (tourism finance) and Gulf investment funds
- Middle Atlas producers and cooperatives
- High-end travel agencies and selective booking platforms

Development options

- Phase 2: 10 additional cabins if occupancy exceeds 65%
- An ARZ product brand (cedar cosmetics, oils, honey)
- Replication of the concept at another Atlas site

07 Financial projections

The estimates below are in current dirhams, with opening in 2030 and a four-year ramp-up. They come from a single model, identical for the French, English and Arabic versions. Amounts are in millions of dirhams (MAD m).

Key assumptions

Assumption	Value	Status
Hotel keys	40	Estimate
Opening	2030 (construction 2028–2029)	Estimate
Average rate per night at opening	MAD 3,900	Estimate
Annual price indexation	3.5%	Estimate
Occupancy (years 1 to 4)	40% → 50% → 56% → 60%	Estimate
Rooms share of revenue	52%	Estimate
Land value	MAD 35m (MAD 500/m²) — to be confirmed by valuation	To verify
Exit value	2040 EBITDA / capitalisation rate of 8.5%	Estimate
Debt (equity IRR)	45% of cost excluding land, 6.5%, 12 years	Estimate
Exchange rate	EUR 1 = MAD 10.8	Estimate

Initial investment (MAD m)

Item	Amount	Share
Land (contribution value, MAD 500/m²)	MAD 35.0m	14%
Construction (buildings)	MAD 117.0m	48%
Roads, utilities, landscaping, energy	MAD 24.0m	10%
Furniture, fixtures & equipment	MAD 28.0m	12%
Studies, fees, permits	MAD 15.0m	6%
Pre-opening, recruitment & training	MAD 9.0m	4%
Contingency	MAD 13.5m	6%
Total	**MAD 241.5m**	**100%**
Branded residences — sales	MAD 86.8m	
Residences — construction and sales costs	– MAD 42.4m	
Net residence margin (reduces the funding requirement)	**MAD 44.4m**	

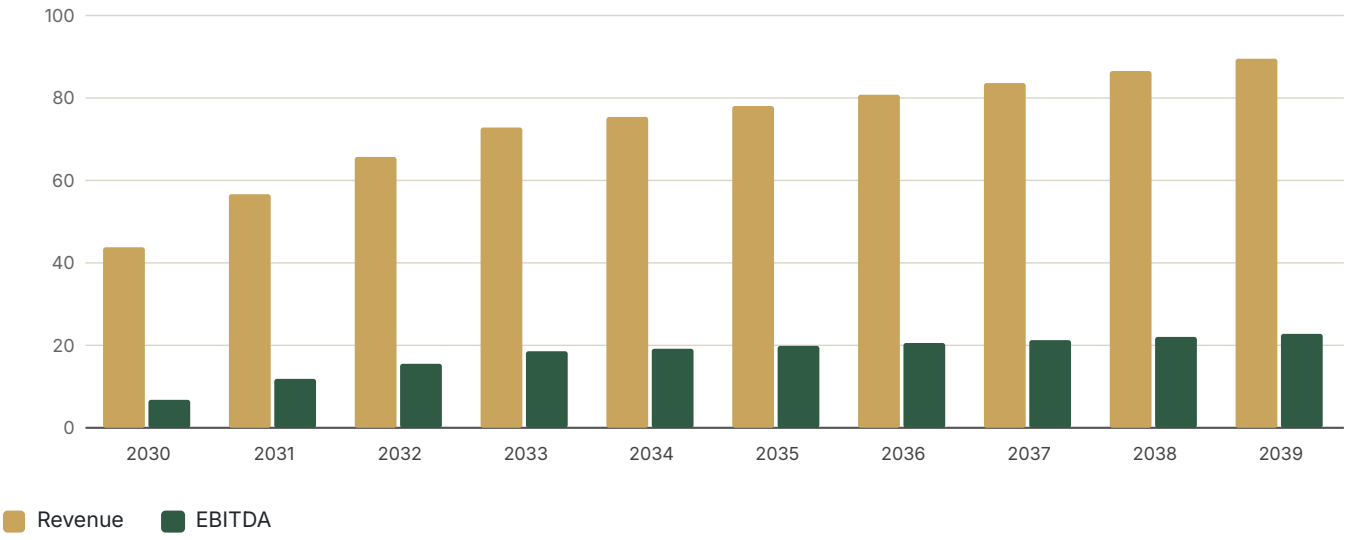

Land (contribution value, MAD 500/m²) · Construction (buildings) · Roads, utilities, landscaping, energy · Furniture, fixtures & equipment · Studies, fees, permits · Pre-opening, recruitment & training · Contingency

Projected operating statement — first 10 years (MAD m)

Year	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039
Occupancy	40%	50%	56%	60%	60%	60%	60%	60%	60%	60%
Average rate (MAD)	3,900	4,036	4,178	4,324	4,475	4,632	4,794	4,962	5,136	5,315
Revenue	43.8	56.7	65.7	72.8	75.4	78.0	80.8	83.6	86.5	89.5
Operating expenses	-32.8	-38.5	-42.0	-45.2	-46.7	-48.4	-50.1	-51.8	-53.6	-55.5
Gross operating profit (GOP)	10.9	18.1	23.6	27.7	28.6	29.7	30.7	31.8	32.9	34.0
Operator, fixed charges and reserve	-4.2	-6.3	-8.1	-9.1	-9.5	-9.8	-10.1	-10.5	-10.8	-11.2
EBITDA	**6.8**	**11.9**	**15.5**	**18.5**	**19.2**	**19.9**	**20.6**	**21.3**	**22.0**	**22.8**

Revenue and EBITDA (MAD m)

Cost structure in the stabilised year

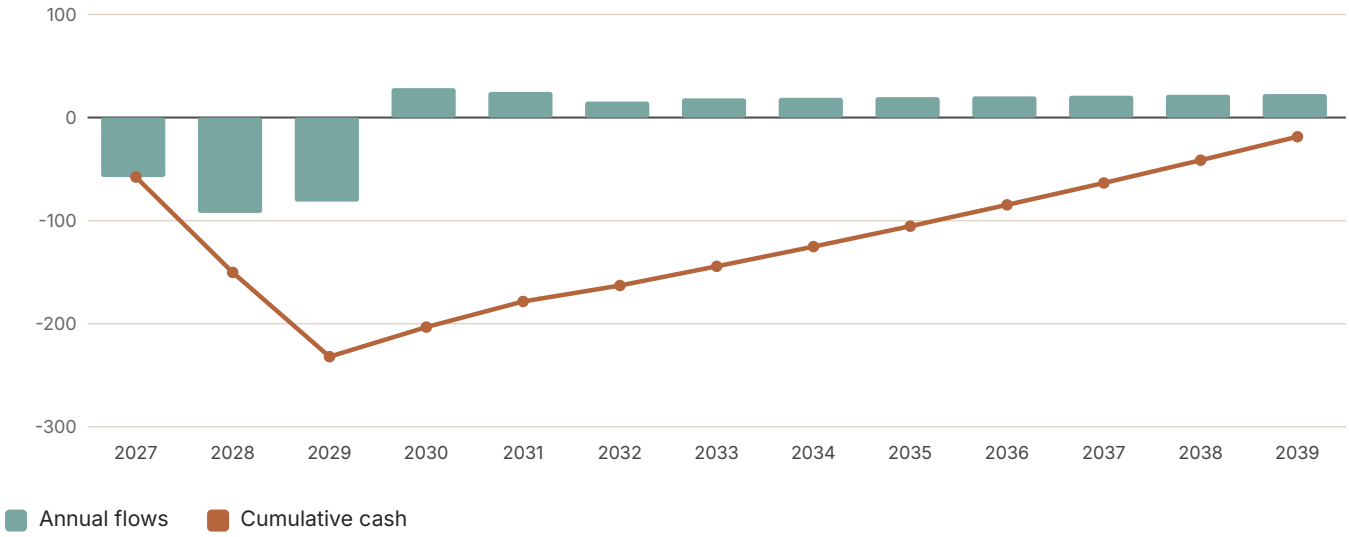

Item	Share
Staff	30%
F&B and spa cost of sales	12%
Energy and water	4%
Marketing and distribution	6%
Maintenance	4%
Administration and other	6%
Gross operating profit (GOP)	**38%**

Below GOP: operator fees (3% of revenue + 8% of GOP), insurance and local taxes (2.5%), FF&E replacement reserve (4%).

Sensitivity analysis

Change	IRR
Base case	9.1%
Average rate −10%	7.4%
Average rate +10%	10.7%
Occupancy −5 points	8.1%
Occupancy +5 points	10.1%
Investment +10%	7.8%
Investment −10%	10.6%
15% investment grant	10.9%

Cumulative cash flow (MAD m)

Annual flows: investment (negative) from 2027 to 2029, then operating EBITDA; residence sales are included. A possible sale of the asset in 2039 is not included in this chart.

Return indicators

Criterion	Value
Total investment (land included)	MAD 241.5m
Net requirement after residence sales	MAD 197.1m
Cost per key (excl. land and residences)	MAD 5.16m
Stabilised revenue (2033)	MAD 72.8m
Stabilised EBITDA (2033)	MAD 18.5m
Yield on cost, stabilised year	7.7%
Project IRR (base, 13 years with exit)	9.1%
IRR with a 15% investment grant	10.9%
Indicative equity IRR (45% debt)	10.4%
Estimated exit value, end 2039	MAD 277.6m
Payback (without exit)	≈ 13.8 years

ARZ is a long-term asset: its running yield is moderate (7.7% of the investment in the stabilised year), but it creates an estimated exit value of MAD 277.6m in 2039 and offers exposure to a growing market. The sale of the 14 branded residences reduces the net funding requirement to about MAD 197.1m. The grant provided by the Investment Charter (up to 30% for eligible projects) can significantly improve the IRR; we have not included it in the base case.

08 Investment highlights

Scarcity
A product without equivalent in the Middle Atlas: luxury eco-resort, treehouse cabins, forest spa.

Land value creation
Turning 7 ha into an operating resort multiplies the value of the land compared with its current use [Estimate].

Recycled capital
Residence sales fund about MAD 44.4m of the project during construction.

Image and ESG
A certifiable project aligned with the environmental and social criteria of institutional funds.

Timing
Opening targeted for 2030, coinciding with the World Cup and strong international visibility for Morocco.

Exit
Asset saleable to a hotel investor or fund after stabilisation.

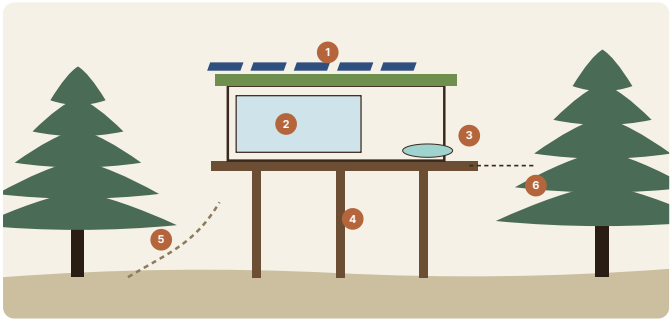

Land value. Taken at MAD 35m (MAD 500/m²) as a hypothetical contribution value, the land is monetised through the project: via the value of the operating asset (hospitality) or via sale prices (development). An independent valuation is essential before any negotiation.

09 Illustrations and architectural proposals

The visuals below are conceptual views illustrating the architectural and landscape intent. They are not an architectural design; photorealistic 3D renderings will be produced by the selected architect after the sketch-design stage.

Conceptual view: suites and treehouse cabins at the edge of the cedar forest, at dusk.

Indicative section of a treehouse cabin: stilts, hot tub, green roof, solar panels.

1. Green roof and solar panels
2. Glazed living room opening onto the canopy
3. Hot tub on the terrace
4. Timber stilts: unsealed ground, roots preserved
5. Timber boardwalk
6. Rainwater harvesting

Reference image provided: neo-Mediterranean architecture with tiled roofs, arcades and stepped terraces set in the forest. It illustrates the intended level of finish and landscape spirit.

Shared architectural principles

- Height limited to one storey plus attic; buildings kept below the tree line.
- Local materials: Middle Atlas stone, certified timber, terracotta tiles, lime render.
- Pitched roofs sized for snow; bioclimatic design and reinforced insulation.
- Tree-by-tree survey and maximum preservation of existing cedars and oaks.
- Low, downward-facing outdoor lighting to protect the night sky and wildlife.

10 Risks and mitigation

Risk	Level	Mitigation
Plot inside the National Park boundary or on forest land	High	Overlay of cadastre / park boundary, official zoning note and opinion of the Water and Forests administration before any significant spending.
Permits (planning, environment, tourism)	High	Early environmental impact study; dialogue with the urban agency, the Fès-Meknès Regional Investment Centre (CRI) and the municipality; possible exemption or approved investment project route.
Constraints linked to the prestige neighbourhood (security, heights, nuisance)	Medium	Discreet consultation with local authorities; low-rise buildings, no noisy activities at the edge, access control.
Seasonality (weekends, summer, snow)	Medium	Four-season programming, midweek corporate retreats, events, long-stay offers for Gulf clients.
Construction cost inflation	Medium	6–8% contingency included, modular design, package tendering, capped-price contracts.
Currency and inflation risk	Low	Partly foreign-currency revenue (international clients), indexed rates.
Forest fire risk and winter access	Medium	Firebreaks, fire water reserve, fire-rated materials, snow-clearing plan and secondary access.
Moderate running yield for a mountain hotel	Medium	Branded residences, investment grant, cost control and midweek events.

11 Strategic conclusion

ARZ is the strongest scenario in terms of image and long-term value. It suits a patient investor (10-year horizon or more) seeking a rare, certifiable and saleable asset. Its base-case return is moderate; it becomes attractive with the investment grant, suitable bank financing and a recognised brand.

Recommendations for delivery

1. First clear the land risk (national park, title, zoning): everything else depends on it.
2. Secure a branded operator before filing the building permit: it adds value for banks and residence buyers.
3. File an eligibility application under the Investment Charter with the Fès-Meknès CRI.
4. Launch pre-sales of the 14 residences to Gulf and diaspora buyers.

Indicative roadmap

Q4 2026 – Q1 2027	Land, legal and planning due diligence
Q1 – Q2 2027	Programming, sketch design and in-depth market study
Q2 – Q4 2027	Financial structuring, operator selection, partners
2027	Permits, detailed design, tenders
2028 – 2029	Construction (in phases)
2030	Opening / handovers — 2030 World Cup window

Comparison of the three scenarios studied for the same site

Criterion	A — ARZ Eco-Resort ★	B — Ifrane Highlands	C — SAFA Longevity
Type of project	Luxury eco-resort + 14 branded residences	Chalet village and branded residences (for sale)	Wellness & longevity retreat + 12 residences
Total investment	MAD 241.5m	MAD 233.1m	MAD 286.2m
Project IRR (base)	9.1%	18.7%	8.5%
Payback period	≈ 13.8 years	≈ 4.6 years	≈ 14.2 years
Risk profile	Medium — hotel operation	Medium — sales pace	High — operator and health licences
Main strength	Long-term asset and brand image	Fast capital rotation	Highest average rate, growing niche

The three scenarios are studied for the same site and cannot all be built in full; a partial combination (for example a smaller eco-resort plus a residential estate) can be studied at the next stage. Payback periods are measured from the first investment (January 2027), without sale of the asset.
